AN ANALYSIS OF TEXT-BOOKS IN
WORLD HISTORY SINCE 1883

A THESIS
SUBMITTED TO THE DEPARTMENT OF
EDUCATION AND THE GRADUATE COUNCIL OF THE KANSAS STATE
TEACHERS COLLEGE OF EMPORIA IN PARTIAL FULFILLMENT OF
THE REQUIREMENTS FOR THE DEGREE OF
MASTER OF SCIENCE

KANSAS STATE LIBRARY
MAX S. HUEBNER
M. S. T. C.
JUNE 1932
EMPORIA, KANSAS
ACKNOWLEDGMENT

The writer wishes to acknowledge his indebtedness to Dr. Edwin J. Brown, Director of the Graduate Division of Emporia Teachers College, whose suggestions and constructive criticisms have aided materially in the writing of this thesis.

Introduction

Many studies in education have indicated that what most people thought to be true, was not, and that in some cases it was almost exactly opposite to what was thought to be true. In a way one is reminded of Mark Twain's experience when he took a balloon ride and actually saw that the states were all the same color, and that Ohio was not red and Indiana was not blue as they were pictured in maps he had studied, and as he thought them to be.

As many remember courses that were studied in high school it seems that American History was a study of the Revolutionary War, War of 1812, Mexican War, Civil War, Spanish American War, and World War. It would seem that most of the material in history books was about wars and that the rest was about political problems and political development.

Again many teachers criticize text-books in history because as they have said, "No wonder, most of the students and especially the girls dislike history. It is mostly about wars and fighting. The boys are the only ones that can like it."

Some prominent educators talk glibly about the material in these books. This is the statement of Frank Abbott Magruder. 1"Overemphasis of war in History--It has

been a common practice of historians to devote a large portion of their books to military campaigns and to military heroes. Even American authors of school histories have devoted the major portion of their texts to the glamour and glory of war. Thus youth is thrilled by the excitement of campaigns and made to desire military experiences; and an ambitious boy sees a military career as a route to heroisms."

This study presents material which should help one to determine the truth of these statements.
PURPOSES OF THE STUDY

The problems that this thesis attempts to answer are as follows:

1. What is the content of text-books in World History?
2. What changes have been made in text-books in World History in the last fifty years?
3. What do the authors emphasize in the prefaces?
4. To what extent do text-books in World History discuss government and political development?
5. What portion of the text-books is devoted to a discussion of battles?
6. What is in the text-books in addition to a discussion of governments and battles?
Scope of the Study

The following is a list of the books that were used in this study:

2. P. V. N. Myers; *General History*; Ginn and Company; Boston. 1889.
3. James Harvey Robinson, James Henry Breasted, Emma Peters Smith; *General History of Europe*; Ginn and Company; Boston. 1921.
4. Hutton Webster; *World History*; D. C. Heath and Company; Boston. 1925.
7. J. Lynn Bernard and Agnew O. Roobach; *Epochs of World Progress*; Henry Holt and Company; New York. 1930.

Two of these books were published before 1900. The next two books were written by persons who had been editing texts in Ancient and Modern History since 1910, and these books represent the period from 1910 to 1920. All of these books have been used as texts in the State of Kansas.
The last four books listed represent popular texts published to-day in World History. The last listed in the group is the present adopted text for the State of Kansas.

This study covers those text-books that have been most widely used in Kansas in World History.
Methods of Procedure

The author has taught most of the material in these books for several years and should be thoroughly acquainted with the material in the books. This material was read and re-read, and then it was classified.

In a few cases it was very difficult to decide the exact classification into which some material belonged. This difficulty was not commonly met with however. A sincere effort has been made to classify all of the material in the texts. Only a small portion of the texts was omitted from the study. This portion was so small that it has little bearing on the study.

The material is counted in terms of lines. The texts average ten words to the line which made the line a desirable unit of measurement.

Due to the lack of a standard list of historical institutions, the writer has arbitrarily set up a classification of his own, a classification based upon historical material.

The material in the texts has been listed under the following classifications:

1. The Institution of Government and Political Development
2. Battles
3. The Institution of Religion and the History of the Church
4. Social Development
5. Mechanical Development
6. Fine Arts
7. Liberal Arts

Each text has been divided into seven natural divisions.

1. Early Civilization
2. Greek Civilization
3. Roman Civilization
4. The Middle Ages
5. From the Renaissance to the French Revolution
6. From the French Revolution to the World War
7. From the World War to the Present Time
Definition of Terms

The terms used in this study are defined as follows:

"The Institution of Government and Political Development", is that material that deals with governments, the development of democracy and nationalism, dynastic troubles, the expansion of countries, the development of law, the bringing together of people under a common government, and the development of internationalism. This material is presented in detail in "Appendix A".

The second term that is used, "Battles", is very closely connected with the first term. Most of the material in this second class is very closely connected, or even a part of "The Institution of Government and Political Development", but as there was so much of this material, and since it is in regard to this material that much criticism has been offered, it was thought necessary to make a separate classification of this material. The content in this section is limited to that material which deals with the actual description of battles, the fighting, the marches, the strategy, and the suffering of the warriors. This does not include the cause of the wars, or the results of the wars—which is placed in the first division. This material is all catalogued in "Appendix B".

The third division, "The Institutions of Religion and the History of the Church", deals with the development of the early religions of primitive man, the Egyptians,
the Greeks, and Romans, the Monotheistic religions, and
the history of the church. Religious wars in so far as
they deal with the church are also included. The strug-
gles between church and state, and the general topic of
the papacy, are also included. This material is all list-
ed in "Appendix C".

The fourth division, "Social Development", contains
material dealing with the family, the home, the relation-
ship between members of the family, marriage and divorce,
customs of the people, classes of people, economic troubles,
social welfare, poverty, and racial problems. Detailed
presentation of this material is found in "Appendix D".

The fifth division, "Mechanical Development", deals
with inventions, mechanical discoveries, commerce, in-
dustry, transportation, and the industrial revolution.
This material is listed in "Appendix E".

The sixth division, "Fine Arts", deals with liter-
ature, painting, sculpturing, oratory, art languages,
architecture, and music. All of this material is pre-
sented in detail in "Appendix F".

The seventh division, "Liberal Arts", deals with
philosophy, education, new methods of thought, new science,
schools and universities, and intellectual progress. All
of this material is listed in "Appendix G".

As was stated in, "Methods of Procedure", the texts
have been divided into seven natural divisions. The first
division, "Early Civilization", deals with primitive man,
the beginnings of history, and early history in the
Oriental countries. Dates that would include this period of history would be from 500,000 years B.C. to 1 A.D. Most of this history takes place between 3,000 B.C. and 1 A.D. This period overlaps Greek Civilization, but it includes nothing that deals with the Ancient Greeks.

The second period, "Greek Civilization", deals with that great Greek civilization which covers the years from 1500 B.C. to 300 B.C.

The third period, "Roman Civilization", includes all of the material about Roman Civilization from 753 B.C. to 476 A.D.

The fourth period, "The Middle Ages", deals with the events from the fall of Rome in 476 A.D. to the beginning of the Renaissance.

The fifth division, "From the Renaissance to the French Revolution", includes the Renaissance, the development of nationalism, the beginnings of democracy, the period of exploration and discovery, up to the beginnings of the French Revolution. Dates that would include this period are roughly 1450 A.D. to 1789 A.D.

The sixth period, "From the French Revolution to the World War", begins with the French Revolution, and includes the Napoleonic wars, revolutionary wars in connection with the development of democracy and nationalism, also the industrial revolution, and the expansion of Europe up to the beginning of the World War. Dates that would include this period are 1789 to 1914.

The seventh period, "From the World War to the Present
Time", starts with the causes for the great war, includes the World War, the settlement of the war, the growth of internationalism, and recent events. This period begins in 1914 and comes up to the time that the last book was published. The first two books included in this study were published before 1900, and this explains the fact that they do not have any material in this last division.
PART I.

THE PREFACES IN THE TEXT-BOOKS

IN WORLD HISTORY

What do the authors of the books have to say in their prefaces? What things do they emphasize that are being taken up in this study? Do they emphasize any changes that are to be made in their texts? Is the material in a particular text, different than the material in another text, which presumably does not emphasize that particular phase of history?

The important statements in these prefaces are presented here in chronological order, beginning with the text published in 1883, and ending with the texts published in 1930.

A. S. Barnes¹ says:

"In this work, the political history, which occupies most if not all of the ordinary school-text, is condensed to the salient and essential facts, in order to give room for some account of the literature, religion, architecture, character, and habits of different nations. Surely, it is important to know something about Plato as all about Caesar; to learn how the ancients wrote their books as how they fought their battles; and to study the virtues of the old Germans and the dawn of our customs in English home-life, as to trace the petty squabbles of Alexander's successors, or the intricacies of the wars of the Roses."

P. V. N. Meyers² says:

"This volume is based upon my Ancient History

¹A. S. Barnes; General History; Preface p. III. A. S. Barnes and Company; New York. 1883. 600 pp.
²P. V. N. Myers; General History; Preface pp. III.-IV. Ginn and Company, Boston. 1889. 758 pp."
and Medieval and Modern History. In some instances I have changed the perspective and the proportions of the narrative; but in the main, the book is constructed upon the same lines as those drawn from earlier works."

James Harvey Robinson, James Henry Breasted, and Emma Peters Smith say: "In preparing this outline of the whole history of man from the earliest beginnings of civilization down to the present, those topics have been chosen which have the greatest interest for us to-day—those which help us most in understanding our own time. Occasionally it has been necessary to include certain historical facts of no great importance in themselves merely to establish the sequence or because they are deemed matters of common knowledge which the student should know because they are often alluded to. Happily these latter cases are few.

"The older manuals gave scanty attention to anything preceding the Greeks, and were well nigh through their task when they reached the year 1870. But the long narrative of the past has been lengthened out at both ends. Recent discoveries of archaeologists have altered fundamentally our conception of man's progress and made vivid and real the long, long ages during which civilization was slowly accumulating before it reached that high degree of refinement which we find among the ancient Egyptians.

"The so-called "prehistoric" period and the story of the ancient Orient are now full of absorbing interest and can no longer be dismissed in a few introductory pages.

"On the other hand our own times have assumed a significance which they did not possess for us prior to the year 1914. The shock at finding the world at war and the multitude of perplexing problems which the war has revealed have led us to realize how ill understood are the conditions in modern Europe and in the Orient. The story of the World War must therefore be told with some account of its causes and of the questions still awaiting adjustment.

"Furthermore, it is obviously no longer possible to leave out some account of the Far East in our

3 James Harvey Robinson, James Henry Breasted, Emma Peters Smith; General History of Europe; Prefacepp. III.-IV. Ginn and Company; Boston. 1921. 667 pp.
out-line of European history, for the war clearly showed how close has become the relationship between all peoples of the earth and how delicate and pressing is the problem of international adjustment."

Hutton Webster⁴ says:

"It covers the entire historic field, together, with a chapter on prehistoric times; it presents a survey of human progress, rather than a chronological outline of events. They ought to gain from such a course, however brief, some conception of social development and some realization of man's upward march from the Stone Age until the present time.

"About two thirds of the book are devoted to the last three centuries. This period furnishes the immediate historical background of the life of to-day: It is therefore the period ordinarily most interesting and profitable to the students."

Clarence Perkins⁵ says:

"In preparation of this book the author's purpose has been to present a narrative of human progress in all branches of civilization from its beginning in Ancient Egypt and the Tigris-Euphrates Valleys to the present day. Not too detailed for effective use by students in the second year of high school.

"The life of the people has been emphasized but not so much as to necessitate condensing the skeleton of political history to mere generalizations. Without good understanding of the main facts of political and economic history, descriptions of how the people lived is less valuable.

"Wars have not been emphasized but occasionally a word picture of a decisive battle has been inserted to arouse interest. Grown-ups still like to read about a good fight and certainly high school boys have not yet developed beyond it. It is hoped that the book may prove interesting to readers and students.

"The material of the book has been apportioned so as to lay greatest emphasis on Modern World History.

---

⁴Hutton Webster; World History; Preface pp. III.-IV.
Starting with a brief survey of the progressive civilization made in the ancient Orient, giving more detail on that of the Greeks and Romans and somewhat more on that of medieval Europeans, the treatment becomes fuller as the present time is approached and greatest emphasis is laid on world history since 1870 and especially since the treaties of peace were made in 1919.

"An effort has been made to connect up facts in early history with present day conditions."

Henry W. Elson⁶ says:

"The two questions that must constantly be in the mind of the writer are, first, what to choose for the text, and second, how to present it. As to the first, he must be able to appraise historical values; he must present that which will lead the reader to visualize the past so as to best grasp the problems that contributed most to the social, moral, economic, and political development of the peoples whom he is studying. Thus by acquiring a correct knowledge of his historical inheritance, the reader will understand and appreciate the principles on which are based the ideals and institutions of the civilization of the present."

J. Lynn Barnard, and Agnew O. Roordach⁷ say:

"The great value of history in the school curriculum is to show human progress, to indicate the slow and laborious steps by which man has learned to cooperate with his fellows and lead the group life. Dates are scattered plentifully throughout this volume in order to give a time sequence that will steady the reader. But only a few of these dates, those of world wide significance, need be memorized. For history is a story, an ever unfolding drama of man's upward climb, and nothing must come between that story and the reader.

"Moreover, this survey should include Asia, Africa, and our own Western Hemisphere, and not Europe alone--our economic interests are world wide, and our political relationships are following our commerce. We cannot escape, if we would, the responsibilities that come with being a world power. Epochs of World Progress has been planned by the authors to meet the needs and facilitate the world

---

of a World Survey Course."

J. Salwyn Schapiro, and Richard B. Morris say:

"It was recognized, on the one hand, that a mere chronicle of political and military events would prove full and unprofitable; and, on the other, that a summary of the outstanding contributions of ancient and medieval peoples to European history would be decidedly inadequate, as it would not provide the student with the proper historical foundations for modern European history.

"As ideas are more important than dates, cultural achievements more stimulating than dynastic rivalries, and business conditions more vital than the details of battles, traditional, political, and military incidents are often supplanted by less familiar material relating to economic, social, and cultural conditions.

"The writer has attempted to bring home to the student the importance of the law in every era and its intimate bearing on the life of man. Among other things, the law is a mirror which reflects changing social and economic conditions.

"In addition, while traditional personages of secondary importance are neglected, the common man, his work, ideals, and political achievements, are stressed together with the position of woman and her social and intellectual status in ancient and medieval times.

"The present volume treats of the history of Europe from the seventeenth century to the present. It describes, within the limits of space, the political, social, economic, and cultural events. A modern text in history no longer contents itself with a mere recital of campaigns, military and political; it aims to give to the student a view of the various aspects of human life that go to make up the history of a nation."

In the text published in 1883, the author says he will condense the political history, and give more room for accounts of literature, religion, architecture, character, and habits of different nations.

In the text published in 1889, the author makes no attempt to change the material in the text, but bases it upon the same lines as those drawn from earlier works.

In the text published in 1921, the author says he is interested in those topics which have the greatest interest for us to-day—those which will help most in understanding the world in which we live.

In the text published in 1925, the author says he is especially interested in the immediate historical background of the life of to-day. He is also interested in presenting the social development in order that the student may have some realization of man's progress from the Stone Age to the present time.

In the text published in 1927, the author says he wants to present a narrative of human progress. Political history has been condensed, the life of the people has been emphasized, and the greatest emphasis has been laid on Modern World History. Wars have not been emphasized but occasionally a word picture of a decisive battle has been asserted.

In the text published in 1928, the author believes that material should be presented on the social, moral, economic, and political development of the people in order
that we may understand and appreciate the principles on which are based the ideals and institutions of the civil-
ization of the present.

In the text published in 1930, history as a story is emphasized, as an ever-unfolding drama of man's upward climb.

In the last text published in 1930, cultural achievements, business conditions, economic, social, and cultural conditions, are said by the authors to supplant dynastic rivalries, details of battles, traditional political and military incidents.

These statements will be considered in regard to the material that is presented in these text-books.
PART II.

EARLY CIVILIZATION

This first division includes all the material presented in the text-books up to the civilization of the Greeks. This includes primitive man, the Egyptians, the countries in Asia Minor or the Fertile Crescent and other Asiatic countries that made contributions to early civilization such as India, and China. Dates that include the material presented in this section would be from 500,000 B.C. to 1 A.D.

From table 1, it is seen that the text-book published in 1883, has 105 pages on this section in history. The text-book published in 1889, has 86 pages on this section. The pages decrease as we go down the list in the books, and the last two books have 40 pages and 19 pages respectively. Thus it can be seen that the material in the books on "Early Civilization", has decreased from 105 pages to 19 pages.

Table 2, shows how the material on those pages is classified. The decrease in pages does not mean so much until Table 2 is considered to see just what decreases have been made.

The material that deals with, "The Institution of Government and Political Development", has been reduced from 648 lines in 1883, 960 lines in 1889 to 140 lines in 1930. The earlier texts present a very detailed account

6. Fine arts.
7. Liberal arts.
of the political development of Egypt, Babylonia, Assyria, Phoenicia, Judea, Hittites, Persia, India, China, Semites, Chaldea, and Sumeria. Lines of rules and entire dynasties are traced. The later texts deal principally with Egypt and Persia in regard to political development, because it is principally these two countries that have made contributions along this line. The later texts have omitted China and India from this section of the books. Later in the texts as contributions were introduced in European history from these countries, or as they become of importance to the western civilization, these things are mentioned.

Some discussion is presented in the later texts which deals with the evolution of government among primitive peoples. The steps from tribal government to the highly centralized government of Egypt and especially Persia is presented in the later texts.

As was stated in the definition of terms the division called, "Battles", includes only an actual description of the fighting, and the number of men put in the field, and the campaigns. It does not deal with causes and results of war. The texts published in 1925 and the last text in the list, devote no pages to a discussion of "Battles", in Early Civilization". The general trend has been a reduction of material of this nature from 104 lines in 1883 to none in 1930. This shows that there is a tendency to
decrease the material dealing with "Battles" on "Early Civilization".

The material dealing with "The Institution of Religion and the History of the Church" has been decreased. This decrease is represented by the figures of 467 lines to 36 lines. This decrease would appear to be significant. This decrease shows that in the last half century, the text-book writers in World History devote less space to religious development of Early and Ancient Man. The texts published before 1900, go into detail in regard to the religion of the Egyptians, Persians, Assyrians, Chaldeans, and Phoenicians. An explanation is also given of the religion of the Hebrews. The later texts present a discussion on religion of Primitive Man, the Egyptians, the Persians, and the Hebrews, but these texts do not go into detail in listing their gods and goddesses with their duties and powers.

The amount of material that deals with "Social Development", has remained about constant, with the exception of the earliest text-book which devoted a total of 36 lines to this discussion. The earlier texts present material which would be quite similar to the material presented in a story about a day in old Athens. This is of course along the line of a discussion on social development, but it is more like a story than a part of the history of social development.

The amount of material on "Mechanical Arts" has remained about the same in all the texts. This means that
due to the fact that there has been a decrease of the material on this period, "Mechanical Arts" is increasing in importance in "Early Civilization".

The decrease of the material in this period on "Fine Arts" has been from 562 lines to 14 lines.

In "Liberal Arts", there has been steady decrease in the amount of material included. In the latest texts in the list, but seven lines are devoted to this topic.

SUMMARY

In this section, which is called "Early Civilization", the following facts are discovered:

1. The pages devoted to this section by the textbook writers in the last fifty years has decreased from 105 pages to 19 pages.
2. The decrease of the material on, "The Institution of Government and Political Development", has been from 648 lines to 140 lines.
3. The amount of discussion devoted to "Battles" has decreased from 104 lines, to nothing in some cases, as it is in the last text in the list. This is the greatest decrease.
4. The material dealing with, "The Institution of Religion and the History of the Church", has decreased from 467 lines to 56 lines.
5. There has also been a decrease in the material on "Social Development", which has been from 836 lines to 14 lines.
6. The amount of material devoted to the "Mechanical Arts" has remained about the same.

7. The later authors have not presented as much material on "Fine Arts" as have the earlier text-book writers. This material has decreased from 562 lines to 14 lines.

8. Very little material has been devoted to "Liberal Arts" in any of the texts, and there has been a decrease from 46 lines to seven lines.

The author believes that the following conclusions are warranted:

1. Very little material except that which deals with those contributions that were made by Egypt and the Persians should be explained in connection with "The Institution of Government and Political Development".

2. More discussion should be given on primitive man in regard to earlier progress in connection with "The Institution of Religion and Political Development". During this period the foundations were laid for the religion that we have to-day. The religion we have to-day is based upon the religion of Primitive Man.

3. Most of the material that deals with "Battles" could be omitted from "Early Civilization", without decreasing the value of this section.

4. Much of the material that is presented on "The Institution of Religion and the History of the
Church”, help us very little to understand problems along this line to-day.

5. More material should be presented in "Early Civilization", which shows the development of religion from nature worship to Christianity.

6. A story-book presentation of a day in Athens gives little information that is valuable. Material should be presented which will help to understand the social problems of to-day.

7. The early inventions of man in his slow progress should receive more attention.

8. Much of the material in the early texts on "Fine Arts" could be omitted.

9. More material could be presented on "Liberal Arts" in connection with Early Man.

10. More space should be given to "Early Civilization" than is given in the later texts. Many things have recently been discovered in regard to how primitive man lived and how he made progress, along with the realization of the important part that primitive man has played in World History.
PART III.

GREEK CIVILIZATION

The period "Greek Civilization", includes all of the material written about that great civilization of the Ancient Greeks. Dates that would include this period are roughly 1500 B.C. to 300 B.C.

Table 1 shows that the two books published in 1883 and 1889 have devoted 90 and 135 pages respectively, to this period of history. The two texts published in 1930, have 40 pages and 24 pages to this same period. There has been a gradual decrease of the amount of space devoted to "Greek Civilization". The largest decrease in the material, is on "Battles". In the text in 1883, there are 1,179 lines given to a discussion of the campaigns and battles of those Greeks. These 1,179 lines represent only the actual battles, not the causes and the results of the wars. The last text in the list has devoted only 59 lines to the same material.

The decrease of the material on "The Institutions of Government and Political Development", is from 1,297 lines to 225 lines. The Greeks have made some contributions along this line that are important. It is important to understand how their government was organized. An experiment was made in what was called a democratic government. The later texts present enough of the material so one can understand what Greece contributed in this field. The text published in 1883 devoted 1,297 lines to this
Table 3. Number of lines on "Greek Civilization", in each classification.

<table>
<thead>
<tr>
<th>Year of text-book</th>

</tr>
</tbody>
</table>

Read table thus: In the text-book published in 1883, there are 738 lines in Classification 1. Read in like manner for succeeding years.

*Classifications:
1. The institution of government and political development.
2. Battles.
3. The institution of religion and the history of the church.
4. Social development.
5. Mechanical development.
6. Fine arts.
7. Liberal arts.
discussion, while the last text in the list devoted only 225 lines to the same topic.

Table 3 shows that there has been a decrease of the material on "The Institution of Religion and the History of the Church", from 177 lines to 20 lines. The early texts present a list of Greek gods and goddesses and a thorough explanation of Greek Mythology. This material is interesting, but more than just an explanation of the religious and the pagan idea of Greek Mythology would seem to be placing too much emphasis on this material, since the later texts present just one or two pages on the same topic.

The "Social Development", has decreased from 396 lines to 68 lines. The early text-books present, "Scenes from Real Life", which in a way discusses social conditions, but it does not help us to understand the position of women, or the element in their social life that helped the Greeks to produce such a great civilization.

The text-books in World History do not give much space to the "Mechanical Arts" of the Greeks. These people did not make outstanding contributions in this line as they did in other fields. The discussion in the last fifty years has been decreased only slightly.

Table 2 shows that on the topic "Fine Arts", the text-book in 1883 devoted 777 lines to this material and the text-book in 1889 devoted 887 lines to the same discussion. The two texts published in 1930, have only 149 lines and 108 lines respectively. The lines have decreased from 777 to 108. The one thing that the Greeks excelled the world
in was "Fine Arts". In literature, oratory, sculpture, and architecture, the Greeks have made many contributions to civilization. A text could well be written on this topic alone and later writers have seemed to assume that they can hope to do no more than introduce the subject.

Table 3 shows that on "Liberal Arts", the material has been reduced from 231 lines in 1883, 365 lines in 1889, to 41 lines in 1930.

SUMMARY

In this section which is called "Greek Civilization", the following facts are discovered:

1. There has been a decrease in the number of pages devoted to "Greek Civilization", from 124 to 25.

2. The greatest decrease has been in regard to "Battles". Here the decrease is from 1,179 lines to 59 lines.

3. The number of lines on "The Institution of Government and Political Development" has decreased from 488 lines to 225.

4. There has been a decrease in the number of lines devoted to "The Institution of Religion and the History of the Church". This decrease has been from 177 lines to 20 lines.

5. The number of lines on "Social Development" of the Greeks has decreased from 398 lines to 68 lines.

6. There has been little change in the material or
The author believes that the following conclusions are warranted:

1. The early texts give too much space to "Greek Civilization".

2. The later text-books in World History devote a sufficient amount of space to a discussion of "The Institution of Government and Political Development", and the earlier texts that devoted 788 to 1,297 lines on this phase of Greek History have over-emphasized political development.

3. The texts published in 1883 and 1889 devote too much space to a discussion of "Battles" in Greek History. The importance of the wars should be pointed out, along with causes and effects, but only a minimum of space should be given to an actual description of military campaigns. Some of these wars are important, and even some of the battles should be discussed. Those that have had an important effect on later civilization should be discussed, and the importance should be pointed out, but that does not call for 1,179 lines or 40
4. The early text-books go into detail too much in regard to "The Institution of Religion and the History of the Church" on "Greek Civilization".

5. Much of the material that the early texts present on "Greek Civilization", in regard to "Social Development" is of little value to the high school students.

6. The early texts devote too much space to "Fine Arts" on "Greek Civilization".

7. The later text-books could well afford to give more space to "Liberal Arts" in Greek Civilization. In the field of liberal arts, the Greeks have made important contributions. By presenting material to show what the Greeks did in this line, is a chance to help to make World History a well rounded story of the human race.
PART IV.

ROMAN CIVILIZATION

This period, called "Roman Civilization", includes all of the material on Ancient Rome. Dates included in this period are from 753 B.C., the mythical founding of Rome, to 476 A.D., the fall of Rome.

Table 1 shows that the texts written before 1900, have devoted 109 pages and 144 pages to "Roman Civilization". The two texts published in 1930, have devoted only 58 pages and 37 pages respectively to "Roman Civilization". The figures show that with the later writers, "Roman Civilization" has decreased in importance as far as presentation to high school students is concerned.

Table 4 shows that the greatest decrease is in regard to "Battles". The text published in 1883 devoted 787 lines to "Battles", and the text published in 1889, devoted 1,088 lines to the same topic. The two texts published in 1930, devote 109 lines and 45 lines to "Battles" in "Roman Civilization". The 1,088 lines in the text-book published in 1889 implies that about one-twentieth of the text-book is devoted to this discussion.

Table 4 shows that the number of lines devoted to "The Institution of Government and Political Development" in "Roman Civilization", in the text published in 1883 was 1,380 lines, in 1889 it was 2,436 lines. In the texts published in 1930, 765 lines and 487 lines are devoted to
Table 4. Number of lines on "Roman Civilization", in each classification.

<table>
<thead>
<tr>
<th>Year of text-book:</th>
<th>Classification of material*</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>No.1: No.2: No.3: No.4: No.5: No.6: No.7: Total</td>
</tr>
</tbody>
</table>

Read table thus: In the text-book published in 1883, there are 1,380 lines in Classification 1. In the text-book published in 1889, there are 787 lines in Classification 1. Read in like manner for succeeding years.

*Classifications:
1. The institution of government and political development.
2. Battles.
3. The institution of religion and the history of the church.
4. Social development.
5. Mechanical development.
6. Fine arts.
7. Liberal arts.
this same discussion.

Since Rome's great contributions were in regard to this institution, it would appear that much of the discussion on "Roman Civilization", should be on government. In the later texts this is true, but it is not true in the text-books published in 1883 and 1889.

It would be logical to assume that problems aiding in bringing about Rome's fall, should be presented. In the later texts this is done consistently at the expense of space to wars, battles, and political development.

Table 4 shows that there has been an increase in the number of lines on "The Institution of Religion and the History of the Church". In the text published in 1883, two lines tell of the Birth of Christ and the beginning of Christianity. When the fact is considered that there has been a decrease in the number of pages on "Roman Civilization", and there is an increase in number of lines on the beginning and spread of Christianity, it is evident that text-book writers in World History consider this topic of more importance. The increase in the number of lines devoted to "The Institution of Religion and the History of the Church" is from 191 lines in 1883 to 231 lines in 1930.

Table 4 shows that there has been a decrease in the number of lines devoted to the topic, "Social Development" from 775 in 1883 to 80 in 1930.

The number of lines given to discussion on "Mechanical Arts", in "Roman Civilization", has decreased from
129 lines in 1883, to 15 lines in 1930. Rome built some roads and bath-tubs, but it doesn't take many lines to tell about this.

On the lines devoted to "Fine Arts", Table 4 shows that there has been a decrease from 284 lines in 1883, to 55 lines in 1930. The text published in 1925 devotes only 13 lines to "Fine Arts". Virgil, Horace, Cicero, and Lucretius along with Roman architecture should probably be mentioned, but Rome's contributions in the field of "Fine Arts" is very limited.

None of the texts devotes much space to "Liberal Arts". The textbooks of 1883 and 1889, devote 41 lines and 47 lines respectively. The two textbooks published in 1930 devote 30 lines and 8 lines to "Liberal Arts".

SUMMARY

In this section which is called, "Roman Civilization", the following facts are discovered:

1. Only about one-third as many pages are devoted to "Roman Civilization" in the textbooks published in 1930, as are devoted to "Roman Civilization", in the textbooks published in 1883 and 1889.

2. The greatest decrease in material is in regard to "Battles". The last text published in 1930, devotes less than one-twentieth as much material to "Battles" as does the text published in 1889.

3. There is a decrease in the number of lines devoted to "The Institution of Government and Political
Development", from 2,436 lines in 1889, to 587 lines in 1930.

4. There is an increase in the number of lines on "The Institution of Religion and the History of the Church". This increase is from 191 lines in 1883, to 231 lines in 1930.

5. There is a decrease in the number of lines discussing "Social Development". This decrease is from 775 lines in 1883, to 80 lines in 1930.

6. There has not been a gradual decrease in the number of lines on "Mechanical Development". The textbook published in 1883, gives 129 lines on this discussion, and the texts in 1930 give 51 lines and 15 lines.

7. There has been a decrease from 284 lines in 1883, to 55 lines in 1930, on "Fine Arts" of "Roman Civilization".

8. The texts published in 1883 and 1889, devote 41 lines and 47 lines respectively to the "Liberal Arts", while the texts of 1930 devote 30 lines and 8 lines.

The author believes that the following conclusions are warranted:

1. The early text-books devoted too much space to "Roman Civilization".

2. In decreasing the number of lines on "Battles" in "Roman Civilization", little if anything of
practical value is lost as far as high school students are concerned.

3. In spite of the fact that there has been an increase in number of lines on "The Institution of Religion and the History of the Church", this topic should be given more space in World History.

4. The later texts discuss adequately the "Mechanical Development" of "Roman Civilization".

5. "Social Development" of "Roman Civilization" is very important and this topic should be discussed more than it is in the later texts. Many of Rome's problems were social problems. Some of these helped to contribute to her downfall. Some of Rome's social problems, are problems that we face to-day; therefore, it would seem that there should be a considerable number of lines devoted to "Social Development".

6. The texts published in 1883 and 1889 devote too much space to "Fine Arts".

7. Only the early texts give a sufficient amount of space to "liberal Arts". The education, philosophy, and ethics of the Romans should be explained. This cannot be done properly in the space given for this treatment in any of the text-books.

8. The decrease that has been made on "The Institution of Government and Political Development", has not taken anything from the text-book in World History that is of practical value or of interest to the high school student.
PART V.

THE MIDDLE AGES

"The Middle Ages" covers that period of history from the fall of Rome in 476 A. D. to the Renaissance.

Table 1 shows that there has been no radical changes in the text-books in the number of pages devoted to this period. The text-book published in 1883, devoted 114 pages to this section; the one in 1889, 100 pages and the one in 1921, 107 pages; and the texts published in 1930, gave 158 pages, and 62 pages respectively to "The Middle Ages".

Table 5 shows that in this period there has been a large decrease in the number of lines devoted to "Battles".

There has not been a steady decrease in the number of lines devoted to "The Institution of Government and Political Development". Table 5 shows that the texts of 1883 and 1889 gave 1,628 lines and 1,277 lines respectively to this discussion, while the two texts published in 1930 gave 1,893 lines and 787 lines to the same discussion. The early texts are very much interested in tracing dynasties, and most of the material in those texts deals with the troubles of the kings. The later texts show what steps were taken in the development of law, nationalism, beginning of parliament, and the beginning of democratic government.

Table 5 shows that there has been many changes in the number of lines given to the treatment of "The Institution
Table 5. Number of lines on "The Middle Ages", in each classification.

<table>
<thead>
<tr>
<th>Year of text-book</th>
<th>Classification of material*</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>No. 1: No. 2: No. 3: No. 4: No. 5: No. 6: No. 7: Total</td>
</tr>
</tbody>
</table>

Read table thus: In the text-book published in 1883, there are 1628 lines in Classification I. In the text-book published in 1889, there are 1277 lines in Classification I. Read in like manner for succeeding years.

*Classifications:
1. The institution of government and political development.
2. Battles.
3. The institution of religion and the history of the church.
4. Social development.
5. Mechanical development.
6. Fine arts.
7. Liberal arts.
of Religion and the History of the Church" in "The Middle Ages". In 1883, there were 335 lines; in 1889, there were 1,043 lines; in the texts published in 1930, there were 1,186 lines and 504 lines respectively, on this period. These differences are partly due to the length that the text-book writers discuss Islam.

Table 5 shows that there has been no gradual change one way or the other in the number of lines on "Social Development". The text published in 1927, has 607 lines on this topic, as opposed to 157 in the 1930 text which has practically the same total of lines devoted to the seven classifications.

Table 5 shows that most of the later texts gave more space to "Mechanical Arts" than did the texts published in 1883 and 1889. Most of this discussion is in regard to business, the trade guilds and craft guilds.

There has been little change in the number of lines devoted to "Fine Arts" in "The Middle Ages". The text-book of 1921 devoted 388 lines to this discussion, and the text-book published in 1930 devoted 24 lines to the same discussion. The other texts fall between these two. Some of the texts take up material in this section, which others keep to introduce the next section.

Table 5 shows that the greatest number of lines on "Liberal Arts", is in the text-book published in 1921. The text-book published in 1889 has no lines on "Liberal Arts" in "The Middle Ages". The lack of learning, the absence
of any system of education, the beginning of universities, the superstition of the people, all are omitted and apparently are not, from the author's viewpoint, worthy of space.

SUMMARY

In this section that is called "The Middle Ages" the following facts are discovered:

1. There has been little change in the last fifty years in the number of pages on "The Middle Ages".
2. There has been a decrease in the number of lines on "Battles".
3. There has not been a gradual decrease in lines on "The Institution of Government and Political Development", but there has been a change in the character of the material presented.
4. There has been a slight increase in the number of lines on "The Institution of Religion and the History of the Church".
5. Most of the later texts, have more lines on "Mechanical Development".
6. There has been little change in the last fifty years on the number of lines on "Social Development".
7. There has been no remarkable changes in the material on "Fine Arts", in the last fifty years.
8. The later texts have more material on "Liberal Arts" in "The Middle Ages", than do the earlier texts.
The author believes that the following conclusions are warranted:

1. The material that is presented in the later texts on "The Institution of Government and Political Development" is of much more value than the material that is presented by the texts written before 1900 on this same topic. The early texts traced dynasties while the later texts show the development of nationalism and democracy.

2. The decrease in the number of lines devoted to "Battles" takes nothing from the text-books in World History, that is practical or interesting. Some of the battles are important, because they led to the unification of England or France, but an actual description of the military campaign is not very useful for the high school student.

3. More material could well be presented in most of the texts on "Liberal Arts" in "The Middle Ages".
PART VI.

FROM THE RENAISSANCE TO THE FRENCH REVOLUTION

This division of history, "From the Renaissance to the French Revolution", includes that period from the beginning of the Renaissance, in the first part of the fifteenth century, to the beginning of the French Revolution, in the latter part of the eighteenth century.

Table 1 shows that the number of pages devoted to this period of history in the text-books in the last fifty years has declined from 180 pages to 78 pages. There has been no great change in the comparative number of pages given to a discussion of "From the Renaissance to the French Revolution".

Table 2 shows that there has been a decrease in the later texts in the number of lines devoted to "Battles" in this period. The texts of 1883 and 1889, give 346 lines and 371 lines respectively to a discussion of "Battles". The two texts published in 1930 give 157 lines and 26 lines respectively, to "Battles".

The number of lines on "The Institution of Government and Political Development" has remained about the same. The earlier texts however, are interested in tracing a dynasty. The Tudors and the Stuarts in England, the Bourbon dynasty in France are traced back to the early centuries. Their political troubles, their dynastic troubles are
Table 6. Number of lines on "From the Renaissance to the French Revolution", in each classification.

</tbody>
</table>

Read table thus: In the text-book published in 1868, there are 1,708 lines in Classification 1. In the text-book published in 1889 there are 3,094 lines in Classification 1. Read in like manner for succeeding years.

*Classifications:
1. The institution of government and political development.
2. Battles.
3. The institution of religion and the history of the church.
4. Social development.
5. Mechanical development.
6. Fine arts.
7. Liberal arts.
discussed. The later texts discuss this same material, especially in England, to show the development of nationalism and the slow development of democracy. The political history is traced in other European countries to show the same things.

It is during this period that the Protestant Revolution and the Catholic Counter Revolution took place. Table 6 shows that the later texts do not have more lines on this than do the earlier texts. The foundations were laid at this time for the Protestant Churches that were founded at this time and those that come later. The "Institution of Religion and the History of the Church" has not been neglected in this section of history.

With the exception of the last text in the list, Table 6 shows that the amount of material on "Mechanical Development" has increased during this period.

This period of history begins with the Renaissance, and during this period there took place the revival of literature, painting, and other of the fine arts. Table 6 shows there has been an increase in the number of lines devoted to "Fine Arts", with the exception of the last text listed. The men that were important in bringing about this revival, and those that made contributions in these fields should be treated. Of course, there is no place in a text-book in World History for one of Shakespeare's Plays, but Shakespeare should not be omitted.

Table 6 shows that the amount of material on "Liberal Arts" has increased during this historical period. The
ideas of the reformer, the ideas of the scientists, and the interest in education, all could be discussed.

SUMMARY

In this section that is called, "From the Renaissance to the French Revolution", the following facts are discovered:

1. In the last fifty years, there have been few changes in the amount of space given to the period, "From the Renaissance to the French Revolution".

2. There has been a decrease in the number of lines on "Battles" from 346 lines to 26 lines.

3. The text-books of 1930, have about the same number of lines on "The Institution of Religion and the History of the Church", as do the text-books published in the 1880's.

4. There has been little changes in the number of lines or in the nature of the material on "Social Development".

5. There has been a tendency to increase the material on "Mechanical Development".

6. There is a slight increase in the amount of material on the "Fine Arts".

7. There has been an increase in the number of lines given to the treatment of "Liberal Arts".

The author believes that the following conclusions are warranted:

1. The decrease in the number of lines on "Battles"
in this period is a step in the right direction. Some important wars took place during this period that influenced the development of government and religion. Their causes and results should have been taken up, but the later texts did not give a description of the military campaign, or the actual description of fighting. Russia, Sweden, Prussia, England, France, Denmark, Holland, Austria, and Spain, all have had many disputes over territory in this period. The causes for those disputes, the results of those disputes, if those results affected later history, could have been treated, but the later texts gave no actual description of the battles, with the possible exception of the defeat of the Spanish Armada.

2. Much of the material that the earlier texts presented on political development, is of little value to the high school student, and that it does not help him to understand his government to-day.

3. The material that is presented in the later texts on political development, (the material on democracy and nationalism, that takes the place of the material in earlier texts on dynastic wars) helps the student to understand the institution of government.

4. More space should be given to "Liberal Arts" in this period.

5. A word picture of more individuals who have helped
us to break away (partly) from medieval superstition and ignorance should be given.

6. "The Institution of Religion and the History of the Church has not been neglected during this period."
PART VII.

FROM THE FRENCH REVOLUTION TO THE WORLD WAR

This sixth division, "From the French Revolution to the World War", covers those events that took place during the French Revolution and continuing up to the beginning of the World War. This period is included within the dates, 1789 to 1914.

Table 1 shows that there has been an increase in the number of pages devoted to this period. The text-books published in 1883 and 1889 gave 64 pages and 84 pages, respectively, to this period. The last text-book in the list published in 1930, gave 383 pages to this period. In the early texts when the reader reached the French Revolution, he had practically completed the book. In the later texts, the reader is about half-way through the book when he reaches the French Revolution. The text-book published in 1883, gave only 64 pages to the hundred years of history that took place before the book was published. The last text in the list, which was published in 1930, gave 462 pages to the 140 years of history that took place before the book was published. Recent text-books devote more space to recent historical events and periods.

Table 7 shows that in spite of the great increase in material on this period "From the French Revolution to the World War" there has actually been a slight decrease in the number of lines on "Battles" during this period.
Table 7. Number of lines on "From the French Revolution to the World War", in each classification.

| Year of text-book: No.1: No.2: No.3: No.4: No.5: No.6: No.7: Total |
|-------------------|-----------------|-----------------|-----------------|-----------------|-----------------|-----------------|-----------------|-----------------|
| 1863              | 1003            | 297             | 32              | 67              | 29              | 83              | 10              | 1521            |
| 1869              | 1965            | 264             | 154             | 60              | 64              | 13              | 2560            |
| 1921              | 3867            | 164             | 71              | 250             | 472             | 289             | 5113            |
| 1925              | 5613            | 178             | 209             | 436             | 996             | 149             | 302             | 8085            |
| 1927              | 4460            | 379             | 105             | 406             | 671             | 20              | 357             | 6396            |
| 1928              | 4436            | 228             | 61              | 282             | 462             | 8               | 139             | 5615            |
| 1930              | 3532            | 327             | 23              | 400             | 808             | 40              | 114             | 5070            |
| 1930              | 7955            | 184             | 210             | 629             | 1041            | 22              | 213             | 10254           |

Read table thus: In the text-book published in 1863, there are 1,003 lines in Classification 1. In the text-book published in 1869 there are 1,965 lines in Classification 1. Read in like manner for succeeding years.

*Classifications:*
1. The institution of government and political development.
2. Battles.
3. The institution of religion and the history of the church.
4. Social development.
5. Mechanical Development.
6. Fine arts.
7. Liberal arts.
The text-book published in 1883, had 297 lines on "Battles", while the last text in the list, which is published in 1930, had only 184 lines on "Battles".

In number of lines the largest increase in this period, is on "The Institution of Government and Political Development". The lines have increased from 1,003 lines in 1883, to 7,955 lines in 1930. The French Revolution, its effects, and the growth of democracy and nationalism are taken up in this period. The earlier texts do not discuss this period at any length. The material that is included traces dynasties.

Another great increase, and the greatest in this period in terms of percentage, is in regard to "Mechanical Development". Table 7 shows that the text-books in 1883 and 1889, respectively, give 29 and 84 lines to "Mechanical Development".

Table 7 also shows that there has been an increase in the space given to "Liberal Arts". The text-books of 1883 and 1889 gave only 10 lines and 13 lines respectively, to "Liberal Arts".

Table 7 shows that there is a large increase also in the number of lines devoted to "Social Development". The text-books of 1883 and 1889, gave only 67 and 70 lines, respectively, to the social conditions of the people during the French Revolution and during the industrial revolution. The two texts published in 1930 gave 400 lines and 629 to this topic.

There is little change in the number of lines on "The
Institution of Religion and the History of the Church. Little space is given to this topic in any of the textbooks in World History. There is a little tendency to increase the number of lines on this topic.

Table 7 shows that some of the textbooks say nothing about "Fine Arts", and that there is not much space given to this topic.

SUMMARY

In this section, "From the French Revolution to the World War", the following facts are discovered:

1. There has been a large increase in the number of pages on this period of history in the last fifty years in the textbooks in World History.
2. There has been a large increase in the number of lines on "The Institution of Government and Political Development".
3. The number of lines on "Battles" has actually decreased.
4. There has been a large increase in the number of lines on "Mechanical Development".
5. The early textbook writers do not discuss the industrial revolution.
6. There has been little change in the number of lines on "The Institution of Religion and the History of the Church".
7. There has been little change in the number of lines on "Fine Arts".
There has been a large increase in the number of lines on "Liberal Arts".

The author believes that the following conclusions are warranted:

1. The early texts do not discuss "Mechanical Development" to the extent that it should be discussed. The great industrial revolution took place during this period. Those same historians that discussed the "Mechanical Development" of the Egyptians at length neglected to say much about the "Mechanical Development" that had taken place during their life times. Even though those authors thought that the inventions and discoveries of the ancient world were important, as is evidenced by the large amount of space given to the topic, they neglected to discuss inventions and discoveries of the Modern World.

2. The early texts neglected to discuss "Social Development" to the extent that it should be discussed.

3. Much of the material that should be presented on "The Institution of Government and Political Development" in a course in World History should be on the period "From the French Revolution to the World War".

4. The decrease in the number of lines on "Battles" shows that the material on wars and battles is decreasing.

5. More space could be given to "Liberal Arts".
During this period, public education, entered into a new period of development. The United States was making its great contribution to the world in the form of a system of public education. This is important. The early text-books which described so carefully the education of the Spartan, neglected to describe the system of public education that was developing during the nineteenth century.
PART VIII.

FROM THE WORLD WAR TO THE PRESENT TIME

This last section, "From the World War to the Present Time", includes the World War and those events that have taken place since the war. Dates included in this period are from 1914 to 1930.

Table 1 shows that there has been little change in the last ten years in the number of pages on "From the World War to the Present Time". Table 8 shows the number of lines on "The Institution of Government and Political Development", varies from 1,642 to 2,259. Little change has been made in the number of lines on "Battles". The number of lines varies from 332 to 587. From one-fourth to one-eighth of the material in this section is on "Battles". There is no material in any of these textbooks on "Fine Arts" in this period. Table 8 shows that the last text in the list has 291 lines on "Liberal Arts" while the other texts have nothing on this classification.

SUMMARY

In this section "From the World War to the Present Time", the following facts are discovered:

1. There is little change in the number of lines on "The Institution of Government and Political Development".

2. There is little change in the number of lines on
Table 8. Number of lines on "From the World War to the Present Time", in each classification.

PART IX.

SUMMARY AND CONCLUSIONS

This thesis has as its objective the study of textbooks in World History. The purpose of the study has been to analyze the material in the textbooks in World History with a view to determining the content of these books.

The textbooks have been read and studied to determine the type of material in these books. The prefaces of the books have been analyzed to see what the author or authors say about the material that they are going to present. The study includes an analysis of textbooks dating from 1883 to 1930. This includes fifty years of textbooks in World History.

The textbooks have been divided into seven logical divisions. These divisions are:

1. Early Civilization
2. Greek Civilization
3. Roman Civilization
4. The Middle Ages
5. From the Renaissance to the French Revolution
6. From the French Revolution to the World War
7. From the World War to the Present Time

The divisions are explained in "Definition of Terms".

The material in these textbooks has been classified into seven different classes. These are not institutions. Some may be called institutions, but some are not. This
classification has served very well for the study. The seven classifications are as follows:

1. The institution of government and political development.
2. Battles.
3. The institution of religion and the history of the church.
4. Social development.
5. Mechanical development.
6. Fine arts.
7. Liberal arts.

These terms are explained and defined in "The Definition and Explanation of Terms".

The study shows the amount of material on each of the historical periods in each of the text-books in the last fifty years, and the amount of material on each of the classifications of the material. That is, how much material deals with the church, government, battles, fine arts, liberal arts, social life, or industry, in each of the historical periods. Each part of this study has been summarized at the end of each division. It is not necessary to present those conclusions here, but rather a summary and the conclusions of the entire study.

Tables 9, 10, 11, 12, 13, 14, 15, and 16, show what is in each of the text-books included in this study. Tables 17, 18, 19, and 20 are a summary of the material in the text-books included in this study. From a study of these tables the following facts are discovered, which are

Read table thus: Sixteen and thirty-nine hundredths per cent of the text-book published in 1883 deals with Division 1. Nine and ninety hundredths per cent of the text-book published in 1889 deals with Division 1. Read in like manner for succeeding years.

*Historical divisions:
1. Early Civilization.
2. Greek Civilization.
3. Roman Civilization.
4. The Middle Ages.
5. From the Renaissance to the French Revolution.
6. From the French Revolution to the World War.
7. From the World War to the Present Time.
presented as a summary of this study:

1. There has been an increase in the number of lines on "The Institution of Government and Political Development" in the last fifty years in the textbooks in World History.

2. The text-book published in 1883, the earliest text included in the study, is the only book which gives less than half of its discussion to "The Institution of Government and Political Development". This text gives 41.77 per cent to this discussion.

3. The last text-book in the list, which was published in 1930, has more lines on "The Institution of Government and Political Development", than any book in the list. This text gives 70.22 per cent to this phase of history.

4. Table 16 shows that the last text in the list has 10,044 lines on "The Institution of Government and Political Development", in the last two periods of World History. This is 2,869 lines more than the total number of lines in the entire text-book published in 1883 on "The Institution of Government and Political Development".

5. The early text-books spent much time tracing dynasties, while the later texts spent much time showing the development of democracy, nationalism, and internationalism.

6. The material presented in the later texts on "The Institution of Government and Political Development", 
deals more with the evolution and development of government rather than dynastic troubles, and is concerned more with recent history rather than ancient and medieval history.

7. From 41.77 per cent to 70.22 per cent of the material in the text-books in the last fifty years deals with "The Institution of Government and Political Development". When we consider that the lines on "Battles" deal with government and political development, the total percentage of the material on "The Institution of Government and Political Development" is from 59.40 per cent to 74.81 per cent.

8. Table 17, shows that there has been a decrease in the total number of lines on "Battles" from 3,021 in 1883, to 666 in 1930.

9. Table 16, shows that 339 lines, or more than half of the lines on "Battles" in the text-book published in 1930, deals with the World War.

10. Table 18, shows that the decrease in the percentage of the total material in the text-books on "Battles" has decreased from 17.63 per cent in 1883 to 5.59 per cent in 1930.

11. Comparing the same number of years in history, the text-book in 1883, gives more than nine times as much space to "Battles" as does the text-book published in 1930.

12. Table 9, shows that the text-book published in 1883, has given 1,179 lines to "Battles" on "Greek
Civilization", while the text-book published in 1930, gives only 59 lines to the same topic.

13. Table 10, shows that the text-book published in 1889 has 1,088 lines on "Battles" in "Roman Civilization", while the text-book published in 1930 has only 45 lines on this same period in regard to "Battles".

14. The author of the text-book published in 1889 said in the preface, that he was going to condense the political history, and give more room for accounts of literature, religion, architecture, character, and habits of different nations, and yet he devotes more than one-sixth of the book to "Battles".

15. In the text-book published in 1928, the author says in the preface that material should be presented on the social, moral, economic, and political development of the people in order that we may understand and appreciate the principles on which are based the ideals and institutions of the present, and this text-book, as one can see by table 17, gives 2,614 lines to "Battles". This is 13.65 per cent of the entire book, and a much larger percentage than any of the other books published since 1900.

16. The last text-book in the list published in 1930, gives 3.59 per cent to "Battles" while the text-book published in 1883 gives 17.65 per cent to "Battles".
17. More than 9 per cent of the material in the text-books in World History in the last fifty years deals with "Battles".

18. There has been little change in the total number of lines on "The Institution of Religion and the History of the Church", in these text-books from 1883 to 1930.

19. The percentage of material on "The Institution of Religion and the History of the Church" varies from 8.19 per cent to 14.40 per cent.

20. About 11 per cent of the material in the text-books in World History in the last fifty years deals with "The Institution of Religion and the History of the Church".

21. Tables 9 to 16 show that much of the material in the earlier texts deals with religions of ancient people and religious wars of the Middle Ages, while the later texts present more material to help the student understand the evolution of religion and the history of the church.

22. The text-book that has the greatest number of lines on "Social Development" is the text published in 1883. Sixteen and thirty hundreds per cent of the book is on "Social Development".

23. The early text-book writers are more interested in the religion of the Egyptians, Greeks, and Romans than they are in the religious development since the fall of Rome.
24. With the exception of the text published in 1883, there is little difference in the total number of lines on "Social Development" in these textbooks in World History. The percentage varies, omitting the text published in 1883, from 3.63 per cent to 7.60 per cent.

25. Tables 9 and 10 show that the writers of the textbooks are very much interested in the social life of the ancient people and the Greeks and Romans, but they are not interested in the social life of the people in the modern world.

26. Table 17 shows that there has been a large increase in the material on "Mechanical Development" in the last fifty years. The text-books of 1883 and 1889 have 414 lines and 410 lines, respectively, on "Mechanical Development", while the text-books published in 1930, have 1,861 lines and 1,372 lines on "Mechanical Development".

27. Table 18 shows that the material on "Mechanical Development" varies from 2.02 per cent to 10.30 per cent of the total material in the text-book.

28. More than 6 per cent of the total material in the text-books in World History in the last fifty years is on "Mechanical Development".

29. Tables 9 to 16, show that the early text-books have material on the "Mechanical Development" of the Ancient People, while the later text-books have more material on "Mechanical Development" in the
modern world.

30. Table 17 shows that there has been a decrease in the total number of lines on "Fine Arts" in the last fifty years. This decrease has been from 1,871 lines in 1883 to 451 lines in 1930.

31. Most of the material on "Fine Arts" in the early text-books deals with the "Fine Arts" of the Ancient People, and the Greeks, and the Romans. There is a more even distribution of the material in the text-books written since 1930.

32. The text-book published in 1883 gives 10.92 per cent of the book to "Fine Arts".

33. The last text-book published in 1930, which is the last text in the list, gives 2.44 per cent of the book to "Fine Arts".

34. More than 5 per cent of the total material in all of the text-books has been devoted to "Fine Arts".

35. There has been a slight increase in the material given to "Liberal Arts" in the last fifty years.

36. About 3 per cent of all the material in the text-books is on "Liberal Arts".

37. Table 20 shows that the per cent of the text-books on "Early Civilization" has decreased from 16.39 per cent in 1883 to 2.04 per cent in the last text-book published in 1930.

38. About 6 per cent of all the material in the text-books has been on the period of history called
"Early Civilization".

39. Table 20 shows that the per cent of the text-books on "Greek Civilization" has decreased from 21.03 per cent to 2.95 per cent.

40. About 10 per cent of the text-books have been devoted to "Greek Civilization".

41. The per cent of the text-book on "Roman Civilization" has decreased from 20.94 per cent in 1883 to 5.51 per cent in 1930.

42. About 12 per cent of all the material in these text-books is on "Roman Civilization".

43. The per cent of the text-books on "The Middle Ages" varies from 20.29 per cent to 7.34 per cent.

44. More than 14 per cent of the material in the text-books is on "The Middle Ages".

45. The per cent of the text-books on the period "From the Renaissance to the French Revolution" varies from 10.72 per cent to 25.45 per cent.

46. More than 18 per cent of the material in the text-books is on the period "From the Renaissance to the French Revolution".

47. The per cent of the text-books on "From the French Revolution to the World War" has increased from 8.87 per cent in 1883 to 55.34 per cent in the last text book published in 1930.

48. More than 30 per cent of the material in the text-books are on the period "From the French Revolution
to the World War".

49. Thirteen and forty-five hundreds per cent of
the text-books published since 1900 deal with the
period "From the World War to the Present Time."

50. There is such a large variety of material in these
texts, that if a student comes out of a course in
World History with the idea that World History is
largely concerned with wars or "Battles", the
teacher of that course is the one to blame and
not the text-book writer.

51. The later texts do not overemphasize war or the
glory of war. Military campaigns are practically
eliminated. The lasting contributions that the
great military leaders have made, are discussed,
if there are any, and if not, the military leader
is condemned.

52. The reason that many people assume that history
as it is taught, is largely a list of dynastic
troubles and wars, is not due to the later text-
books. Either the teacher emphasizes the wrong
things, or the dynastic troubles and wars are not
taught to show the development of democracy and
nationalism. The development of democracy and
nationalism is a large part of "The Institution of
Government and Political Development". These dynastic
troubles and wars are just a part, but in some cases
a necessary part, of the development of democracy
and nationalism.
BIBLIOGRAPHY

APPENDIX A

List of the topics and number of lines of material dealing with the institutions of government and political development

I. Barnes' General History
   1. Early Civilization
      a. Beginning of Civil History (13-14) 9 lines
      b. Egypt (15-19) 76 lines
      c. Summary of Egypt (45) 18 lines
      d. Babylon and Assyria (45-51) 181 lines
      e. Summary (70-71) 20 lines
      f. Phoenicia (73-76) 87 lines
      g. Judea, and Hittites (81-87) 114 lines
      h. India, and China (105-109) 38 lines
   2. Greek Civilization
      a. The Political History (115-125) 568 lines
      b. The Persian Wars (125-155) 80 lines
      c. Pericles and Alexander (135-157) 302 lines
      d. Political Summary (200) 38 lines
   3. Roman Civilization
      a. Political History of Rome (203-255) 1039 lines
      b. Imperial Rome (255-269) 306 lines
      c. Political Summary (306-310) 41 lines
   4. The Middle Ages
      a. Medieval Peoples (315-525) 195 lines
      b. Rise of the Sarmans (326-351) 72 lines

APPENDIX D

List of topics and number of lines of material dealing with social development

I. Barnes' General History

1. Early Civilization
   a. The People (19-23) 79 lines
   b. Manners and Customs (20) 7 lines
   c. Egyptians (43) 7 lines
   d. Scenes from Real Life, and Society (67-93) 226 lines
   e. Scenes From Real Life (35-43) 310 lines
   f. Society (51-52) 39 lines
   g. Manners and Customs (60-61) 34 lines
   h. Curious Customs (63) 16 lines
   i. Society (92-93) 11 lines
   j. Domestic Life (99-101) 62 lines
   k. Summary (104) 6 lines
   l. India (105-106) 20 lines
   m. China (110-111) 24 lines

2. Greek Civilization
   a. Society (155-159) 26 lines
   b. Sparta (160-161) 36 lines
   c. Marriage (189-191) 60 lines
   d. Scenes in Real Life (192-199) 263 lines
   e. Civilization (201) 7 lines

3. Roman Civilization
   a. Society (270-271) 61 lines
   b. Manners and Customs (286-287) 36 lines
   c. Games and Festivals, Marriage, and Burial (290-298) 223 lines
   d. Scenes in Real Life (299-308) 431 lines
   e. Civilization (201) 5 lines

4. The Middle Ages
   a. Early German Civilization (322-325) 46 lines
   b. Early English Civilization (347-353) 148 lines
   c. The Gauls (371) 16 lines
   d. The Peasants (383) 12 lines
   e. Cities (383-384) 24 lines
   f. Medieval Civilization (405-417) 63 lines

5. From the Renaissance to the French Revolution
   a. The Sixteenth Century (467-479) 360 lines

6. From the French Revolution to the World War
   a. The French Revolution (536-539) 67 lines
   b. State and the Country (585) 8 lines
   c. Wilberforce (584) 3 lines
   d. Ireland (587) 4 lines

7. From the World War to the Present Time

II. Myers' General History

1. Early Civilization
   a. Castes (8) 21 lines
   b. Policy of Non-Intercourse (17) 15 lines
   c. Society (27) 21 lines
d. Royalty Sports and Cruelty (53-54) 25 lines

2. Greek Civilization
   a. Society in the Heroic Age (98-100) 38 lines
   b. The Age of Tyrants (109-120) 49 lines
   c. Public Services (144-145) 16 lines
   d. Result of Alexander's Conquest (167-158) 2 lines
   e. Social Life of the Greeks (215-221) 161 lines

3. Roman Civilization
   a. Classes of Society (224-225) 25 lines
   b. Sicily (273-274) 19 lines
   c. Public Lands (274-276) 55 lines
   d. The Abuses of Varros (296) 2 lines
   e. Last days of the Empire (339-340) 32 lines
   f. Social Life Among the Romans (350-370) 168 lines

4. The Middle Ages
   a. Feudalism and Chivalry (421-432) 109 lines
   b. Effect of Crusades and Social Life (460) 5 lines

5. From the Renaissance to the French Revolution
   a. Thirty Years War (588) 5 lines
   b. Westernizing Russia (676) 10 lines

6. From the French Revolution to the World War
   a. Causes of the Revolution (647-667) 35 lines
   b. Emancipation of the Serfs (696) 25 lines

7. From the World War to the Present Time

III. Robinson, Breasted, Smith, A General History of Europe

1. Early Civilization
   a. Earliest Man (1-3) 25 lines
   b. Agriculture (17) 12 lines
   c. Craftsman (17-18) 15 lines
   d. Life in the Pyramid Age (18-23) 8 lines

2. Greek Civilization
   a. Rise of Capitalistic Class (65-66) 7 lines
   b. Athens in the Age of Pericles (78-90) 25 lines
   c. Hellenistic Age (101-115) 6 lines

3. Roman Civilization
   a. Rise of a Wealthy Class at Rome (139-140) 34 lines
   b. New Luxury (141) 16 lines
   c. Growth of Great Estates (142-143) 42 lines
   d. Luxury of the Rich Romans (167) 8 lines
   e. The Villas and the Colonie (171-172) 28 lines

4. The Middle Ages
   a. Medieval Life in Country and town (248-263) 130 lines
   b. Peasant Revolt of 1381 (284) 22 lines

5. From the Renaissance to the French Revolution
   a. England Under Elizabeth (338) 17 lines
   b. General Conditions in the Eighteenth Century (407-408) 182 lines

6. From the French Revolution to the World War
   a. Eye of the French Revolution (419-430) 64 lines
   b. Social Conditions in Prussia (469-470) 21 lines
   c. Industrial Revolution (487-498) 71 lines
   d. Syndicates (530) 13 lines
c. Factories (535) 20 lines
f. Irish Question (537-538) 19 lines
g. Russian Serfs (556-568) 42 lines

7. From the World War to the Present Time

IV. Webster's World History

1. Early Civilization
   a. Cultural Development (8) 10 lines
   b. Homes (9) 30 lines
   c. Social Life (11-12) 13 lines
   d. Neolithic Culture (12-13) 12 lines
   e. Social Conditions (40-43) 85 lines
   f. Habitations (9-10) 17 lines
   g. Law and Morality (49-52) 75 lines
   h. New Stone Age (14) 8 lines

2. Greek Civilization
   a. Aegean Civilization (72) 4 lines
   b. Culture of Homeric Society (75-76) 31 lines

3. Roman Civilization
   a. Roman Family (116) 21 lines
   b. Social Conditions (118-119) 21 lines
   c. Growth of Luxury (130-132) 40 lines
   d. City Life (141-142) 7 lines
   e. Roman Society (147-148) 30 lines

4. The Middle Ages
   a. German Society (160) 4 lines
   b. The Castle as a home (174) 14 lines
   c. Chivalry (175) 20 lines
