#### CHAPTER I

#### THE PROBLEM AND DEFINITIONS OF TERMS USED

#### I. INTRODUCTION

In order to achieve full professional status, a field of endeavor must:

- 1. Mender a unique and essential social service
- 2. Establish high standards for the election of members
- 3. Frovide a rigorous training program to prepare its practitioners
- 4. Achieve self-regulatory status for both the group and the individual.

In January of 1968, the Kansas State Teachers
Association voted to approve a recommendation that teaching be

<sup>10.</sup> A. Bucher, "Physical Education An Emerging Frofession," Journal of Health, Physical Education and Recreation, NAMES (September, 1968), 42-47.

legally recognized as a profession. Politicians from both parties addressed their comments and attentions to this idea, which included the proposed Professional Practices Act. This measure was intended to partially ease a ansas school crisis by setting standards for admitting students into the teaching profession and expeling unqualified persons through a legal means. In the spring of 1969, the Ransas legislature approved the proposal of the Pansas State Teachers Association as submitted. For the first time, teaching in Mansas is legally recognized and written in law as a profession.

II. THE ROBLER

### Statement of the Problem

The purpose of this study was to determine what activities Lansas teachers of physical education describe as being characteristic of professionalism.

It was further hoped this study would differentiate the amounts of disagreement perceived by sub-groups of physical educators as to professionalism. The sub-groups were as follows:

- 1. Men physical educators teaching at the elementary school level.
- 2. Men physical educators teaching at the secondary school level.
- 3. Fen physical educators teaching at both the elementary and secondary school levels.
- 4. omen physical educators teaching at the elementary school level.
- 5. Tomen physical educators teadility at the secondary school level.
- 6. Women physical educators teaching at both the elementary and secondary school levels.

#### Importance of the Study

When the Professional Practices Act, submitted by the Kansas State Teachers Association, was approved by the Kansas legislature in the spring of 1969, it was the first time teaching in Kansas was lawfully included as a profession. This act emphasized the need for educators to identify recognized standards for professional duties and actions and the reflection of these standards in performance.

Physical educators are aware of the implications of their work in relation to the field of education as a legally recognized profession. Members are finding it desirable to participate in the challenge of identifying professional standards and producing physical educators who support these standards.<sup>2</sup>

#### Definition of Terms

Actions described as being professional. These were reviewed as responses answered in the Q-sort to be found in Appendix A, page 38.

#### Limitations of the Study

The study was limited to those physical educators of the secondary and elementary levels. This eliminated those teachers in universities, colleges, and junior colleges.

<sup>2</sup>Ibid.

In design, the items for use in the wesort were obtained from educators of elementary, secondary, and college levels. It was expected that some aspects of professionalism as perceived by various individuals may have been excluded as the number of items was limited to fifty-seven.

Hore specifically, the study's most limiting factor was that subjects were a small sample of elementary and secondary teachers in Mansas during the 1968-69 academic year.

#### CHAPTER II

#### REVIEW OF LITERATURE

The question currently being asked is, "Is teaching a profession?" According to books, pamphlets and periodicals, teaching is in the process of becoming a profession. What makes a profession? How is education to be recognized as a profession?

# I. LITERATURE PERTAINING TO THE IMPORTANCE OF THE STUDY

What makes a profession? The following criteria were suggested by the Institutes on Professional and Public Relations and published in 1948 by the National Education Association:

- 1. A profession involves activities essentially intellectual.
- 2. A profession commands a body of specialized knowledge.
- 3. A profession requires extended professional (as contrasted with solely general) preparation.
- 4. A profession demands continuous in-service growth.
- 5. A profession affords a life career and permanent membership.
- 6. A profession sets up its own standards.
- 7. A profession exalts service above personal gain.
- 8. A profession has a strong, closely knit, professional organization.

<sup>3</sup>National Education Association, <u>The Yardstick of A Profession</u> (Institutes on Professional and Public Relations. Washington, D.C.: the Association, 1948), p. 8.

Upon analysis of these characteristics, how does education measure up? "Teaching is sometimes referred to as the 'mother of professions'" because the work of teachers is basic to the preparation of all other professions. Education is a training, a discipline and an exercise of the mental powers of the student. The educator deals with philosophy, societal change and guidance daily. Taft stated in an article written in 1967:

This teacher with his wealth of information could readily be a professional if he would teach his students to think. Instead of erasing the natural curiosity that young people have by his "telling," the professional teacher will let them have the experience and fun of finding out things for themselves?

Ferhaps this example reflects the educators' involvement with "essentially intellectual activities."

Freparation of future teachers has long been of grave concern to educators. Numerous authors have expounded upon proposed requirements for preparing teachers. Development of a "specialized body of knowledge" has long been desired by educators. Research has indicated that educators have developed an extensive body of scientific knowledge.

<sup>4</sup>T. M. Stinnett and Albert J. Bughes, <u>Professional</u> <u>Problems of Teachers</u> (second edition; New York: Macmillan Company, 1963), p. 57.

<sup>5</sup>Clarence ". Taft, "Teaching: Cocupation or Profession," Ohio Schools, XLV (April, 1967), 29.

<sup>6</sup>Chester Harris (ed.), Encyclopedia of Educational Research (third edition: New York: Nacmillan Company, 1960), 1564 pp.

The question may now be, "Has this content gained recognition as to quality and essentiality to the extent of other professions?"

education recommended by the National Teacher Education and Professional Standards Commission is rapidly approaching Mansas. Proposals have been designed for the internship program culminating in the master's degree. Many programs already include internship, replacing pre-service student teaching with a type of on-the-job, more or less, full-time teaching experience. Suggestions for preparation and certification now center upon the role of the teacher. The establishment of the National Commission for the Accreditation of Teacher Education (NCATE) has given great impetus to the upgrading of professional preparation. The American Association of Health, Physical Education and Recreation has supported CATE.

<sup>9</sup>Ibid.

<sup>10</sup> New Horizons in Teacher Education and Professional Standards, op. cit., p. 21.

Continuous in-service growth has been promoted through all agencies of education. Clinics, conventions, publications, and increasing opportunities for fellowships, assistant-ships, and grants have led the way for in-service growth. All levels take part in this endeavor. More public school super-intendents give time off to teachers wishing to attend professional meetings. More funds have been allocated to pay for professional trips taken by public and state school educators. A census was made by the National Education Association of years of college completed by teachers. The census illustrated that 34.7 per cent of all teachers in public schools had had five or more years of college and 45.0 per cent had had only four years of college.

The same census illustrated education's weakest point in its claim for professional recognition. Twenty-eight per cent of the total teachers in the census were a part of the teaching reserve (those teachers which hold degrees but are not teaching at present). As would be expected, women comprise 93.0 per cent of the teaching reserve. 12

standards of conduct. In worll, 1952, the American Association

<sup>11&</sup>quot;Census of All Teachers," NEA Research Bulletin, 42:3, October, 1964.

<sup>12&</sup>quot;The Teaching Reserve," NEA Research Bulletin, 42:3, October, 1964.

of health, Physical Education and Pecreation adopted an operating code for physical education and established the Committee for the Improvement of Professional Preparation in Health Education, Physical Education, and Recreation. In Hansas, the Professional Practices Act will establish an enforcing body for standards. The Pational TEPS Commission in the "Year of the Con-conference" stressed the importance of such establishments in a publication stating: "A profession cannot stop at this point but must, without delay, develop standards of practice and machinery to enforce them." Usual enforcement as revocation of licenses illustrates the determination of educators to establish and enforce criteria to upgrade the educational field.

of a profession but would seem to be the hallmark of educators. The public has long denied the possibility of personal gains in salary to educators. Strides are being made to improve this situation in the United States. The NEA has given some incentive to Kansas for improvement in this area by announcing it would sanction Jansas in the 1969-70 school

<sup>13</sup> illiam Hughes, "Steps Toward Better Accreditation,"

Journal of dealth, Physical Education, and Recreation, KAIII

(April, 1952), 12-14.

<sup>14</sup> New Morizons in Teacher Education and Professional Standards, op. cit., p. 19.

year if changes were not incorporated. The Student Kansas State Teachers Association announced its sanction of Kansas in 1968 for the 1969-70 school year.

Education, not being a legally recognized profession, is the epitome of dedication. Many educators are in favor of referring to the "concern" of teachers rather than "dedication." An article by Fulks stated the desire by saying:

After all dedicated workers are doing something because they ought to do it, and therefore, should be content of the trivia attached to their primary task. Moonlighting in service stations to support families, spending one-fourth of the working day counting lunch and picture money, filling out needless forms in triplicate, or making textbook inventories are not sufficient causes for grievances to the dedicated school teacher. . . Does the doctor spend his valuable time checking whether there are enough clean sheets in the hospital? 15

Educators are a "strong, closely knit, professional organization." Kendall, in an article in the <u>Peabody Journal of Education</u>, compared the MEA, the American Bar Association, the American Dental Association, and the American Medical Association in membership, dues, and service. He found the NEA to be the largest professional organization of the four, with active membership requirements similar to the level of the other three associations. ALA was the only association to have a classification of student membership and for

<sup>15</sup>Dan Fulks, "Professionalism: A Misunderstood and Maligned Word," Ohio Schools, XLIV (December, 1966), 7.

retired members of the teaching profession. The NEA assessed the lowest dues to its members, however the total amount received compared more than equally with the AMA which assessed the highest dues. Kendall reported the services which NEA provided were comparable to the other organizations. In summary, Kendall stated:

Perhaps the differences between the NEA and other leading national professional associations are not so great as one might suspect as shown by the data presented in this article.

What must educators do to be professional? Attempts are being made by appropriate bodies, such as the TEPS Commission through the Year of the Non-conference, to upgrade the professionalism of education. What remains to be done is to educate the members and the public to support these measures.

How is education to be recognized as a profession?

The example of the AMA should be followed in educating the public on the professionalism of education. Speaking tours should be organized by responsible members to inform the members and public in the advancement of the education field toward attaining professional recognition. Articles in newspapers, commercial magazines, and professional journals should distinguish the role of the educator in support of professional autonomy, selection and preparation of members.

<sup>16</sup>Lloyd Kendall, "NEA, ABA, ADA, and AMA--A Comparison," Peabody Journal of Education, 41:5, March, 1964.

#### II. LITERATURE PERTAINING TO DESIGN

Jacobs, at the University of California in 1963, did a dissertation on perceptions of a professional role by a random sample of two hundred forty-nine teachers and fifty administrators. These persons were all certified teachers at a large, unified school district in California. A questionnaire was used. The responses to this questionnaire were first analyzed to determine the perceptions of professional role held by the teachers as a group. Results were then classified into subgroups and compared statistically to determine if significant differences existed in the perceptions of professional role held by various subgroups. It was found that:

In general, the teachers refused to support the questionnaire items which involved almost any kind of penalty for failure to conform to the professional role, but they also refused to oppose these items and tended to take refuge in noncommittal answers such as "don't know."17

The Q-sort methodology was selected for this study.

The items in a Q-sort are stated in positive terms and rated on a continuum from most to least like how a person thinks about a particular subject, in this case professionalism.

"Q-methodology has a valuable contribution to make to social

<sup>17</sup> Frank Treadway Jacobs, "The Perceptions of Professional Role Held By Educators In A Large City School System" (unpublished doctoral dissertation, The University of California, Berkeley, 1963), 226 pp.

scientific and educational research." The previous illustration is only one of many which could be cited as to the effectiveness of current tools for assessing attitudes.

For this reason, the %-sort methodology was used in this study. Further discussion of this method will follow in Chapter III.

#### III. SUMMARY OF LIPSATURE

rogress is being made toward professional recognition for education. What remains to be done is to distinguish what educators of all fields perceive to be professional characteristics and to determine their willingness to support a move toward making or recognizing education as a profession and educators in all fields as professionals. This move calls for a united front and physical education must be an active participant.

Fred V. Merlinger, Foundations of Behavioral Research (New York: Holt, Rinehart and Minston, Inc., 1965), p. 599.

#### CHAPTES III

#### EL OCELUII S

The research tool for part one of the study was the w-methodology as developed by stephenson. 19 Q-methodology consists of giving the subjects a set of items. There are no right or wrong responses. Subjects are instructed to sort the items into a pre-determined number of groups on the basis of how well the item relates to their perception of professionalism. The arrangement determined by the researcher is a normal distribution. For example: Subjects participating in this study sorted 57 items into a forced normal distribution along a nine-point continuum from most professional to least professional according to the subject's perception of professionalism, as shown on the following page. Those items with the smallest sum of column values would rank most professional and those with the greatest sum of column values would rank least professional according to the perceptions of the respondees. Lirections and the tabulation sheet as devised by Marshall 20 were used and may be found in Appendix A. page 38, and Appendix L. page 43.

<sup>&</sup>lt;sup>19</sup>Ibid., pp. 581-599.

			7	•	•	•	7		
				10	•	1.0			
				Τ0	13	10			

Items for the Q-sort were obtained from selected educators who have experience at the elementary and secondary levels. These educators, through their experience, were identified by the researcher as being authorities in their fields. In addition to these, selected college instructors were asked their opinions. The remaining items were placed in random order on a final list which may be found in Appendix A, page 38.

Subjects for the study consisted of a randomly stratified sample of one hundred twenty physical educators in Kansas. Subjects were stratified from the following classifications:

- 1. Men physical educators teaching at the elementary school level.
- 2. Men physical educators teaching at the secondary school level.
- 3. Men physical educators teaching at both the elementary and secondary school levels.
- 4. Women physical educators teaching at the elementary school level.
- 5. Women physical educators teaching at the secondary school level.
- 6. Women physical educators teaching at both the elementary and secondary school levels.

A cover letter, which may be found in Appendix C, page 44, was sent to the subjects, outlining the purpose of the study and the uses made of the data obtained. Enclosed with the letter was a self-addressed, stamped return envelope. A follow-up letter was also sent as a reminder and may be found in Appendix D, page 45. Tables were developed to identify those qualities considered to be professional by Kansas physical educators.

Chi square was used to see if there were statistically significant differences between groups as stated in the problem.

#### CHAPTER IV

#### ANALYSIS OF DATA

twenty subjects returned the 4-sort to the researcher. Of the fifty-one returns, three male and five female did not complete the 4-sort. Of the remaining forty-three, twenty-one were male and twenty-two were female. Ten elementary school physical educators, nine secondary school physical educators, and two physical educators teaching at both the secondary and elementary levels comprised the total completed 4-sorts by males. The total completed 4-sorts by females included two elementary physical educators, thirteen secondary physical educators, and seven physical educators teaching at both the secondary and elementary levels.

The -sort methodology calls for a composite of the individual scores received which are placed along a continuum as follows:

- 1 --- the item with the smallest sum
- 4 --- the next four with the smallest sum
- 7 --- the next seven with the smallest sum
- 10 --- the next ten with the smallest sum
- 13 --- the next thirteen with the smallest sum
- 10 --- the next ten larger sums
  - 7 --- the next seven larger sums
  - 4 --- the next four larger sums
  - 1 --- the item with the largest sum

The composite of the individual scores may be found in Table 1.

TABLE I

COMPOSITE RANK ORDER AND CATEGORY POSITION
OF ITEMS BY ALL RESPONDEES

Category position		Item	Composite total
1	1.	Continual research on new trends in the field and their appropriate uses	112
	2.	Respect for people, such as administrators other teachers, students and their ideas	140
	3.	Being a member of the total faculty not only of the physical education faculty	143
2	4.	Willingness to utilize as far as possible new ideas, methods and techniques in the field	148
	5•	Believing in the importance of the field as related to the total field of education	151
	6.	Willingness to spend ones "extra" time in helping students develop	154
	7.	Membership in professional organizations such as KSTA, KAHPER, NEA, and AAHPER	1 <i>5</i> 8
	8.	Adhere to the conditions of a contract until service thereunder has been per- formed, the contract has been terminated by mutual consent, or the contract has otherwise been legally terminated	163
3	9•	Ability to remain open-minded toward other fields in education and work for their welfare as well as that of your own field	167
	10.	Keeping up-to-date in reading current non-professional literature such as <u>Time</u> magazine, <u>Life</u> , daily newspapers, <u>U.S.</u> News and <u>World Report</u> , best-seller books	168
	11.	Keeping "up" with recent literature in field	169
	12.	Being able to serve the profession at all levels for the good of the profession rather than do just those things through which there is financial gain	
	~~~	which there is financial gain	170

# TABLE I (continued)

	47.	Give prompt notice of any changes in availability of service, in status of applications, or in change in position	246
	48.	Adhering to sanctions set by NEA	249
7	49.	Appreciation of interest areas outside of own field	249
	50.	Being concerned with the whole of education and so field oriented as to disregard the total function of the profession	256
	51.	Knowledge of legislative measures effecting	257
	52.	Being an active member of NEA	267
	53.	Actively involved in research	270
0	54.	Knowledge of the duties of the TEPS Commission and the state advisory council and their recommendations	275
8	55•	Being able to envision outcomes of proposals before they are enacted	294
	56.	Make contributions to professional literature	298
9	57.	Being an active member of AFT	314

activities perceived by Kansas teachers of physical education as being most professional of the fifty-seven items. Those items with the largest sums indicate those activities perceived by Kansas teachers of physical education as being least professional of the fifty-seven items. From the preceding table it can be observed that those items thought to be most and least professional for the total respondents were as follows:

#### Most Professional

- 1. Continual research on new trends in the field and their appropriate uses
- 2. Respect for people, such as administrators, other teachers, students and their ideas
- 3. Being a member of the total faculty not only of the physical education faculty
- 4. Willingness to utilize as far as possible new ideas, methods and techniques in the field
- 5. Believing in the importance of the field as related to the total field of education

#### Least Frofessional

- 1. Being an active member of AFT
- 2. Make contributions to professional literature
- 3. Being able to envision outcomes of proposals before they are enacted
- 4. Knowledge of the duties of the TEPS Commission and the state advisory council and their recommendations
- 5. Actively involved in research

# Distinguishing Between Subgroups

Chi square was implemented to measure the amounts of possible disagreement perceived by subgroups of physical educators as to professionalism. The items rendering significant

differences in perception at the .05 level between men and women physical educators may be found in Table II.

TABLE II

I TEMS OF SIGNIFICANT DIFFERENCE IN PERCEPTION BETWEEN

MEN AND WOMEN PHYSICAL EDUCATORS

Item number	I tem	Value of chi square
2*	Actively involved in professional organizations	5,622
39**	To display confidence in the goals of the profession and strive for these as an active member of the field	14.724

<sup>\* 7</sup> degrees of freedom; .075 level of significance \*\* 6 degrees of freedom; .05 level of significance

Category position (the placement of an item on the composite) and rank order of items revealing significant differences in perception may be found in Table III.

TABLE III

CATEGORY POSITION AND RANK ORDER OF ITEMS
SHOWING SIGNIFICANT DIFFERENCE
BETWEEN MEN AND WOMEN

Item	MEN		WOMEN	
number	Rank order	P	Rank order	P
39	16	4	9	3

Due to the limitation of items which may be placed in a given column, the composite category position of each of two subgroups concerning a particular item may appear in identical categories or adjacent categories and the rank orders may be parallel.

A significant difference at the .01 level appeared among women physical educators in their perception of the activities characteristic of professionalism. The difference may be found in Table IV.

TABLE IV

ITEMS WITH SIGNIFICANT DIFFERENCE IN PERCEPTION BETWEEN WOMEN AT THE .Ol LEVEL OF SIGNIFICANCE

I tem number	Item	Value of chi square
19*	Skill in relating to other people in other fields	26.133

<sup>\* 14</sup> degrees of freedom

Those items with significant difference in perception at the .01 level between women are represented in Table V according to category position (P) and rank order.

TABLE V\*

#### CHAPTER V

#### SUMMARY AND CONCLUSIONS

As described in the review of literature, several pertinent questions have been emphasized by the approval of the Kansas Professional Practices Act. This chapter shall attempt to bring together the findings of Chapter IV as a summary of the study. The divisions of the chapter shall be as follows: (1) The Total Sample, (2) The Sutgroups of the Sample, and (3) Possible Topics for Further Study.

## The Total Sample

of the total one hundred twenty physical educators asked to participate in the study, twenty-one men and twenty-two women completed the Q-sort. The responses represented the elementary and the secondary school teaching levels.

Upon analysis of the data, the five items with the lowest total indicating the most professional activities as perceived by Ransas physical educators are as follows, beginning with the item perceived as most professional of the fifty-seven items to be sorted:

- 1. Continual research on new trends in the field and their appropriate uses.
- 2. Respect for people, such as administrators, other teachers, students and their ideas,
- 3. Being a member of the total faculty, not only of the physical education faculty.
- 4. Willingness to utilize as far as possible new ideas, methods and techniques in the field.
- 5. Believing in the importance of the field as related to the total field of education.

Beginning with the item least professional as perceived by Kansas physical educators, the five items with the largest totals are as follows:

- 1. Being an active member of AFT
- 2. Make contributions to professional literature
- 3. Being able to envision outcomes of proposals before they are enacted
- 4. Anowledge of the duties of the TEPS commission and the state advisory council and their recommendations
- 5. Actively involved in research

#### The Subgroups of the Sample

One item had significant difference at the .05 level between men and women. This item follows:

To display confidence in the goals of the profession and strive for these as an active member of the field.

The male respondents thought "to display confidence in the goals of the profession and strive for these as an active member of the field" should be slightly less emphasized as an activity of professionalism than female respondents.

Another item showed significant difference at the .01 level among women physical educators of the elementary level, the secondary level, and the combination elementary-secondary level. This item follows:

Skill in relating to other people in other fields

The women elementary respondents thought this item should be emphasized more strongly than either the women secondary respondents or the women elementary-secondary respondents.

Women secondary respondents emphasized the item the least of the three women's subgroups.

The following item showed significant difference between men secondary respondents and women secondary respondents at the .05 level:

Recognizing that a profession must accept responsibility for the conduct of its members

Women secondary respondents thought this item should be emphasized more strongly than men secondary respondents.

Two items showed significant differences between all subgroups. These items follow:

1. Attendance at state, district and national meetings 2. Actively involved in professional organizations
"Attendance at state, district and national meetings" showed significant difference at the .01 level; whereas, "actively involved in professional organizations" showed significant difference at the .05 level.

whomen secondary respondents emphasized "attendance at state, district, and national meetings" the strongest of the six subgroups; whereas, men secondary respondents and men elementary-secondary respondents emphasized this item the least. Hen elementary thought "attendance at state, district, and national meetings" should be slightly less emphasized than did women secondary respondents.

Men elementary and men elementary-secondary emphasized "actively involved in professional organizations" the most of the six subgroups; whereas, women elementary emphasized this item the least.

#### Possible Topics for Further Study

There are many questions concerning professionalism to which education must yet find appropriate answers. Further research might be carried on as to how physical education compares to the other areas in education in terms of professionalism. Reasons for the disagreements found in the subgroups might be researched. Comparisons could be made to determine the proximity of professionalism in education to that of law and medicine. Studies to analyze how well education compares to other professions in terms of standards could be researched. Procedures for selection of prospective members of education might also be explored.

Professionalism in education is beginning to make its presence known. The demands of its coming are ever increasing. Educators must meet these demands in order to be truly recognized as professionals.

It is hoped this study may have stimulated interest in analyzing the position education and physical education occupy in terms of professionalism. Without an awareness of the position education holds among its members, educations

struggle to be recognized as a profession is at a stalemate.

#### APPENDIX A

#### ITEMS TO BE SORTED

#### Directions

You have been given a list of 57 items that relate to professionalism. Some may relate more closely than others. What you will be doing is sorting the 57 items along a continuum. At one end you will place the items you think relate more closely with your definition of professionalism. At the other end of the continuum you will place items relating least to your definition of professionalism. Remember, there are no "right" or "wrong" answers. You are simply trying to identify those things you think relate most closely to your definition of professionalism. The sort will look like this when you have followed all the directions:

COLUMN NUMBER I III IV V VI VII VIII II IX Number of items 1 4 7 10 13 10 7 1 to be placed in column

Things you think are more professional

Things you think are less professional

- 1. You have a list of 57 items in front of you. Read through the list and place a  $\vee$  in front of the 12 items you think are most related to professionalism.
- 2. After you have selected 12 items, choose one that you think is "the" most related to professionalism. Put the number of that item under Column I on the Tabulation Sheet.
- 3. You now have 11 of the original 12 items you chose left over. Select 4 of these that you think would rank next to the one you've already selected. Place the numbers of these 4 items under Column II on the Tabulation Sheet.
- 4. You have 7 items left that have a  $\nu$  in front of them. the numbers of these items in Column III on the Tabulation Sheet.
- 5. Now re-read the 45 items you have not used. Place a "0" in front of the 12 items you think are least related to professionalism.
- 6. Of the 12 items with the "O" in front of them choose one that you think is "the" least related to professionalism. Put the number of that item under Column IX of the Tabulation Sheet.

- 7. You now have ll items left with a "O" in front. Choose 4 of these that you think rank next to that side of your continuum and put their <u>numbers</u> in Column VIII of the Tabulation Sheet.
- 8. There are 7 items that have a "0" which you have not used. Put the <u>numbers</u> in Column VIII of the Tabulation Sheet.
- 9. Of the original 57 items you have used 24. From the ones left, select 10 items that are definitely related to what you think is professional. Place an "X" in front of each one, and put the <u>numbers</u> of these items in Column IV of the Tabulation Sheet.
- 10. Choose 10 more items from those you have not used, that describe things you think are not so related to professionalism. Place a "Y" in front of these and list them under Column VI of the Tabulation Sheet.
- 11. You should have 13 items you have not used up to this date. List these 13 items under Column V on the Tabulation Sheet.

Check your work to see that you have used each item once--and only once. Thank you.

#### ITEMS

- 1. Membership in professional organizations such as KSTA, KAHPER, NEA, and AAHPER
- 2. Actively involved in professional organizations
- 3. Keeping "up" with recent literature in field
- 4. Keeping "up" with recent issues and trends
- 5. Keeping "up" with recent development in related fields
- 6. Making contributions in the community and civic areas
- 7. Actively involved in research
- 8. Being able to accept and follow policies and procedures that are established by the administration
- 9. Being concerned about the field
- 10. Believing in the importance of the field as related to the total field of education
- 11. Attendance at professional meetings at the local level
- 12. Make contributions to professional literature
- 13. Be supportive to other teachers
- 14. Dressing appropriately for activity, classroom teaching and professional meetings
- 15. Be discreet in discussing students and parents
- 16. Continual research on new trends in the field and their appropriate uses
- 17. Willingness to spend ones "extra" time in helping students develop
- 18. Attendance at state, district and national meetings
- 19. Skill in relating to other people in other fields
- 20. Skill in human relations
- 21. Being able to relate one's teaching to daily living by doing

- 22. Doing research in the field to up-grade programs
- 23. Speaking out for education and your field while keeping an open mind
- 24. Being able to serve the profession at all levels for the good of the profession rather than do just those things through which there is financial gain
- 25. Appreciation of interest areas outside of own field
- 26. Is helpful to other people as consultant
- 27. Performs intelligently regardless of whether it is in or outside the halls of education
- 28. Being concerned with the whole of education and so field oriented as to disregard the total function of the profession
- 29. Knowledge of legislative measures effecting
- 30. Knowledge of the intent of the Professional Practices Act and other educationally oriented bills
- 31. Being able to envision outcomes of proposals before they are enacted
- 32. Willingness to serve on salary committees, local TEPS commissions, etc.
- 33. Being an active member of NEA
- 34. Being an active member of AFT
- 35. Willingness to utilize as far as possible new ideas, methods and techniques in the field
- 36. Willingness to share ideas and innovations with others in the field
- 37. Being a willing contributor to the profession
- 38. Willingness to spend time in preparation for professional meetings
- 39. To display confidence in the goals of the profession and strive for these as an active member of the field
- 40. Receiving satisfaction from own work

- 41. Good relationships with other members of the field
- 42. Respect for people, such as administrators, other teachers, students and their ideas
- 43. Working knowledge of people well known in the field and what they represent to the field and the public
- 44. Keeping up-to-date with the action and proposals of local professional bodies
- 45. Being able to discriminate between physical education and physical training as it pertains to professional problems
- 46. Performing the responsibilities required of teachers outside the classroom
- 47. Keeping up-to-date in reading current non-professional literature such as <u>Time</u> magazine, <u>Life</u>, daily newspapers, <u>U.S. News and World Report</u>, best seller books
- 48. Adhering to sanctions set by NEA
- 49. Recognizing that a profession must accept responsibility for the conduct of its members
- 50. Make appropriate use of time granted for professional purposes
- 51. Give prompt notice of any changes in availability of service, in status of applications, or in change in position
- 52. Conduct professional business through the proper channels
- 53. Adhere to the conditions of a contract until service thereunder has been performed, the contract has been terminated by mutual consent, or the contract has otherwise been legally terminated
- 54. Being a member of the total faculty not only of the physical education faculty
- 55. Ability to remain open-minded toward other fields in education and work for their welfare as well as that of your own field
- 56. Ability to "maintain your cool" even in matters of threat to your field in order to discuss objectively
- 57. Knowledge of the duties of the TEPS Commission and the state advisory council and their recommendations

#### APPENDIX C

#### COVER LETTER

#### KANSAS STATE TEACHERS COLLEGE

1200 Commercial Street Emporia, Kansas 66801 Telephone 316 343-1200

April 20, 1969

### Dear Physical Educator:

As you know, 1969-70 is an important year for upgrading the professional status of teachers in Kansas. This includes better teachers, higher salaries, and improved teaching conditions. If we, as professional educators, wish to achieve full professional status, we must re-evaluate the profession and our role as professionals. This is the purpose of my thesis "Correlation Between What is Perceived As Professionalism By Kansas Teachers of Physical Education And The Extent To Which These Teachers Involve Themselves With Those Characteristics Identified As Being Professional."

It is realized you are extremely busy and have little time under existing circumstances to participate in professional duties; however, I would appreciate your cooperation in helping to identify professional characteristics and the extent to which you are able to involve yourself in these characteristics. In hopes that you will participate in this study, I am enclosing a set of fifty-seven items which I would like for you to sort. An instruction sheet and a tabulation form have been enclosed. More complete directions have been included on the instruction sheet. The responses you give will be used to re-evaluate physical education's position as a profession as compared to other recognized professions.

The responses should be returned by April 25. If you cannot participate in this study, please return the enclosed card to me as soon as possible.

Thank you for your time and consideration.

Sincerely.

Carmen L. Pennick

Enclosures

#### APPENDIX D

#### FOLLOW-UP LETTER

Department of Physical Education For Women Kansas State Teachers College Emporia, Kansas 66801 May 7, 1969

Dear Physical Educator,

During the week of April 21, 1969, you received a letter concerning a thesis project involving professionalism. Realizing that perhaps the due date of April 25 for the returns might not have been appropriate for your schedule at that time, it would be greatly appreciated if you could return the Q-sort from that letter by May 14. Again, it is recognized that your time is quite valuable to you due to the ever increasing demands of the field; however, any time given to the sorting of the 57 items would be warmly welcomed.

Thank you for your time and consideration in this matter.

Sincerely.

Carmen L. Pennick
