## CONTRIBUTORS

Gilbert A. Leisman is a botanist and Professor of Biological Sciences at Emporia State University. He is primarily interested in fossil plants and Kansas wildflowers.

James E. Ducey is a Research Technologist at the University of Nebraska Medical Center. Mr. Ducey is interested in nature photography--landscapes, botanical specimens and especially avifauna. Mr. Ducey's interest in the Shoemaker Collection grew out of research on birds. Searching through the unpublished notes, travelogues and other natural history records left by Frank Shoemaker impressed Mr. Ducey of the historical value of the observations made during the Shoemaker expeditions. The article presented in this issue was adapted from these materials and includes the reproduction of the 1911 Shoemaker journey to western Nebraska with Dr. Robert Wolcott, zoologist at the University of Nebraska, Professor Cyrus Williams, botanist at Nebraska Wesleyan University, Professor Raymond Pool, botanist at the University of Nebraska, and R.W. Dawson of the Entomological Department of the University of Nebraska.
